The 60 Liter Stove

Chimney with Rain Cap

A five foot long 30 gauge galvanized steel chimney with a rain cap comes with each stove. The design maximizes draft to insure clean burning and to draw smoke and soot away from the cook. The all-weather rain cap allows outdoor use in almost any weather conditions.

Pot and Lid

Each stove comes with a heavy-duty 1/4" thick 15 gallon aluminum pot with big handles and a close-fitting lid. The pot precisely fits down into the stove for maximum efficiency and to insure that smoke doesn't escape.

Specialized Internal Design

The pot is surrounded by a precisely designed heavy steel cylinder, resulting in unbeatable heat transfer. The pot boils a lot faster while burning much less wood.

Long Lasting Stainless Steel Combustion Chamber

The heart of this stove is an advanced design combustion chamber, developed by the Aprovecho Research Center in Oregon. A special high-temperature 24 gauge stainless steel chamber is surrounded with lightweight insulation. The firebox generates clean-burning temperatures above 1100 degrees Celsius that burns up smoke and gases.

Stick Support

The heavy 1/8" steel stick support holds up the fuel, while air flows under the sticks into the combustion chamber helping the burn to be very clean.

Safety

The outside of the stove remains cool enough to touch, and the recessed firebox and recessed pot minimize the potential for burns. The 75 pound stove is relatively lightweight and can be moved by one or two people. At the same time it is very stable and almost impossible to tip over.

Other Features

- We use recycled steel drums that are completely cleaned and reconditioned saving resources and saving you money!
- Each stove is coated with a heavy-duty all weather paint. The stove is easy to clean, rust resistant, and durable.
- The chimney elbow and brace are made from heavy duty 18 gauge steel.
